PATENT

IN THE UNITED STATES PATENT AND TRADEMARK OFFICE

Reissue Application of:

Applicant : Jacob Moskovich
Filed : Simultaneously Herewith

For the Reissue of:

Patent No. : 6,324,014
Granted : November 27, 2001
For : WIDE FIELD OF VIEW PROJECTION LENSES FOR
COMPACT PROJECTION LENS SYSTEMS
EMPLOYING PIXELIZED PANELS
Patentee : Jacob Moskovich

DECLARATION UNDER 37 CFR §1.175

As a below named inventor, I hereby declare that:

My residence, post office address and citizenship are as stated below next to my name.

I believe I am the original, first and sole inventor (if only one name is listed below) or an original, first and joint inventor (if plural names are listed below) of the subject matter which is described and claimed in patent number 6,324,014 granted November 27, 2001, and for which a reissue patent is sought on the invention entitled WIDE FIELD OF VIEW PROJECTION LENSES FOR COMPACT PROJECTION LENS SYSTEMS EMPLOYING PIXELIZED PANELS, the specification of which is attached hereto, said specification being amended by the Preliminary Amendment also attached hereto.

I have reviewed and understand the contents of the above identified specification, including the claims, as amended by the Preliminary Amendment referred to above.

I acknowledge the duty to disclose information which is material to patentability as defined in 37 CFR 1.56.

I verily believe the original patent to be wholly or partly inoperative or invalid, for the reasons described below:

-2-

- ☐ by reason of a defective specification or drawing.
- ☒ by reason of the patentee claiming more or less than he had the right to claim in the patent.
- ☐ by reason of other errors.

At least one error upon which reissue is based is described as follows:

I claimed less than I had a right to claim in patent number 6,324,014 (the '014 patent) and this reissue is being filed to broaden my patent. In particular, in the original '014 patent, I did not claim a projection lens system having a screen, a pixelized panel, and a projection lens with a wide field of view in the direction of the screen, specifically, a half field of view of at least 35°, wherein the projection lens has only five or six lens elements organized into a first lens unit which has a relatively small clear aperture, specifically, a maximum clear aperture which is less than 0.7 times the diagonal of the pixelized panel, and includes a negative lens element with at least one aspherical surface for correction of distortion and a second lens unit which provides most of the power of the projection lens and consists of first and second lens subunits, with the second lens subunit having at least one aspherical surface for correction of spherical aberration. Projection lens systems of this type are disclosed in the examples of the '014 patent and described in the text of the patent. Independent Claim 17 and its dependent Claims 18-31 submitted herewith are directed to these embodiments of my invention.

All errors corrected in this reissue application arose without any deceptive intention on the part of the applicant.

I hereby offer to surrender the original patent and understand that 3M Innovative Properties Company, the assignee of the entire right, title, and interest in the original patent, will provide same or an appropriate statement pursuant to 37 CFR §1.178 prior to the allowance of this application.

I hereby declare that all statements made herein of my own knowledge are true and that all statements made on information and belief are believed to be true; and further that these statements were made with the knowledge that willful false statements and the like so made are punishable by fine or

-3-

imprisonment, or both, under Section 1001 of Title 18 of the United States Code and that such willful false statements may jeopardize the validity of the application, any patent issued thereon, or any patent to which this declaration is directed.
